Task 2 Evidence Checklist

T Level Digital Production, Design and Development – Occupational Specialism

---

Section 1 – Functional Prototype (THE MAIN THING)

Students must develop a **working prototype** of their solution.

Core Requirements

☐ A **working digital solution** based on Task 1 design (You will have access to this).

☐ Must include both:

- Front-end (HTML/CSS/JS)
- Back-end (Python, database (SQL))

☐ It must include **at least two programming languages – this DOES NOT include HTML/CSS!**

Features the Prototype

Should Include:

☐ Navigation system (working links between pages)

☐ Information pages

☐ System that requires a database (e.g. Booking system)

☐ User account system

Consider:

- Register
- Login
- Manage

☐ Database interaction (e.g. Bookings and retrieving data):

Consider: Your ERDs!

☐ **Comments** – Ensure you are placing comments throughout your code to help you and other people understand – consider other developers who may need to adjust your code in the future.

Quality of the Prototype

☐ System works without major errors

☐ Logical flow between pages

☐ Clear and consistent UI

☐ Evidence of **accessibility considerations**

Consider:

Colour choices – are they suitable for colour blindness?

Choice of typefaces (Try not to use more than 2) – ensure you make you of a Sans-serif typeface to make it easier to read for people with dyslexia.

☐ **Good user experience** (easy to use, clear navigation)

Section 2 – Code Evidence

Code Quality

☐ Code is structured and organised

☐ Meaningful variable and function names

☐ Comments explaining key parts

☐ Follows good coding practices

☐ **Can be understood and maintained by another developer**

Section 3 – Iterative Development Evidence

Students must show **how their solution improved over time**.

Evidence should include:

☐ Screenshots or descriptions of different versions

☐ Explanation of changes made

☐ Reasons for changes (e.g. fixing bugs, improving usability)

☐ Evidence of refining features (not just building once)

High-level work clearly shows *"I built → tested → fixed → improved → tested again"*
Not just "I built it once and hoped for the best".

Section 4 – Testing Evidence (Test Log)

Students must produce a **test log using the template**.

What Must Be Included

I strongly recommend that you make use of screenshots in this document when testing!

☐ Test description (what is being tested)

☐ Test data used

☐ Expected outcome

☐ Actual outcome

☐ Comments / fixes

What Testing Must Show

☐ Functional testing (does it work?)

☐ Validation testing (inputs checked properly)

☐ Process testing (e.g. booking flow)

☐ Integration testing (pages work together)

☐ Evidence of **iterative testing**

- Tests are **specific and detailed**
- Bugs are identified
- Fixes are made
- Then **re-tested (regression testing)**

That loop is what pushes it into distinction territory.

Section 5 – Assets Log

Students must track **everything they didn't create themselves**.

Evidence should include:

☐ List of all assets used (images, icons, etc.)

☐ Source (URL or origin)

☐ Description of the asset

☐ Purpose in the system

☐ **Date retrieved**

💡 This is often rushed — but it's easy marks if done properly.

Section 6 – Development Documentation

Students must explain **how they built the system**.

Evidence should include:

☐ Explanation of how key features were implemented

☐ Description of tools/languages used

☐ Explanation of any problems encountered

☐ How those problems were solved

☐ Justification of decisions made during development

Section 7 – Legal, Security & Standards

Students must show awareness of real-world constraints.

Evidence should include:

☐ Secure coding practices (e.g. validation, password handling)

☐ Consideration of data protection (e.g. GDPR)

☐ Accessibility considerations

☐ Ethical use of assets (copyright)

Section 8 – Final Submission Checklist

Students must submit:

Prototype

You should include ALL versions of your website.

☐ **Working prototype files** (**multiple versions**)

Documentation

☐ Development documentation (PDF)

☐ Assets log (PDF)

☐ Test log (PDF)

Everything should follow correct naming conventions
